

Baptisia arachnifera

Hairy Rattleweed

Baptisia arachnifera is found occurring naturally only in Georgia and that in Brantley and Wayne counties. Hairy Rattleweed is on both the Georgia Department of Natural Resources and Federal Endangered Plant List. Bright yellow flowers and heart-shaped leaves with a silvery cast in late June make *Baptisia arachnifera* a desirable plant in the landscape. (The leaves resemble those of eucalyptus.) Flowers sometimes last into August. Requires full sun, and needs periodic burning to maintain permanence in the home landscape. Prefers sandy soil.

Height: 1½' - 2' Spread: variable
