

Buddleia davidii

Butterfly Bush

This Buddleia species is not native to the United States; however, if you want butterflies, this is a good choice to make. This shrub looks best when left natural. Flowers occur on the new growth, so occasional hard pruning can be beneficial. The showy flowers last from summer into fall; foliage often persists through winter. Drought tolerance is another good feature found with Butterfly Bush.

Height: 5' – 15'. Spread: 5' – 10'
