

*Hibiscus moscheutos*  
**Swamp Rose Mallow**

**Woody-stemmed perennial that has large pinkish-white to deep pink flowers in summer. The seed pods that follow have an interesting appeal. Plant in full sun to light shade. Flowering is more abundant in sun. Damp areas are the natural habitat. At the campus arboretum, in drier sites, the leaves drooped occasionally during the 2007 drought; flowers were still abundant. Attractive to many species of butterflies and hummingbirds.**

**Height: 5' – 7'      Spread: 2' – 3'**
