

Lonicera sempervirens

Coral Honeysuckle

Bright coral, trumpet-shaped flowers on this native vine attract hummingbirds during the long flowering season. Songbirds love the red fruit that follows. Good cover for arbors and fences; can be used in woodland settings or as specimen plant. Tolerates part shade, but does best in full sun. It does well in poor soil, with moisture levels from average to dry.

Height: 10' – 20'
