

***Morella cerifera***  
**Southern Wax Myrtle**

**Evergreen *and* fragrant, this native of the Coastal Plain makes an excellent specimen plant or hedge. Fast growing, grows in dry or moist soil, thrives in sun or part shade. As a screen or hedge, this shrub looks best left in its natural shape. Individual plants limbed up to make a small tree can be used as accent plants.**

**Height: 10' – 15'.    Spread: 10' – 15'**
