

# *Styrax americanus*

## American Snowbell

**Showy, fragrant white flowers in the spring make this native small tree very desirable. It will grow in full sun with eastern exposure or partial shade with western exposure; more sun means more flowers. It will grow in moist soil, and can be used as a wetland plant. Snowbell can be pruned as a multi-trunk small tree or large shrub. It is deciduous; makes an excellent addition to the landscape.**

**Height: 12' – 20'**
